DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-19 and 35-42, drawn to a method of fabricating a mandrel for electroformation of an orifice plate, classified in class 29, subclass 846.
 - II. Claims 20-34, drawn to a mandrel for electroformation of an orifice plate, classified in class 347, subclass 54.

The inventions are distinct, each from the other because of the following reason:

2. Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product of Group II, can be made by a materially different process, such as one without a plurality of pillars joined unitarity.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
4. If applicants elect inventions Group I, a further restriction to one of the following inventions is required under 35 U.S.C. 121.

I-A Claims 1-19, drawn to a method of fabricating a mandrel for electroformation of an orifice plate, classified in class 29, subclass 846.

I-B Claims 35-42, drawn to a method of fabricating an orifice plate, classified in class 29, subclass 890.1.

The inventions I-A and I-B are distinct, each from the other because of the following reason:

Inventions I-B and I-A are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination (Group I-B) as claimed does not require the particulars of the subcombination (Group I-A) as claimed because, Group I-B does not require the particulars of removing surface regions of the substrate disposed generally between the mask elements to create a base having a base surface and a plurality of pillars as required by Group I-A.

5. Because these inventions are distinct for the reasons given above and the search required for Group I-A is not required for Group I-B, restriction for examination purposes as indicated is proper.

6. A telephone call was made to Walt W. Kamstein on 10/05/2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tai Van Nguyen whose telephone number is 571-272-4567. The examiner can normally be reached on M-F (7:30 A.M - 4:30 P.M).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Peter Vo can be reached on 571-272-4690. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
